It is possible for you to design product with critical graphics registration and crossovers that cannot be achieved in manufacturing. While variation depends on the product and machinery required to manufacture it, Manufacturing allows for 1/16" tolerance for variation in registration with EACH production process that affects position of graphics on the product. It is the user's responsibility to understand that registration variation can occur in finished product and if the user designs graphics with critical crossovers that cannot be achieved in manufacturing, Colad does not warn the user or stop your project at the manufacturing stage.
